As you can see, the Linde Warehouse Manager is an easy to understand software with intuitive functions and a modern user interface, which can run in your Browser, on forklift terminals, hand-scanners and smartphones.

LINDE WAREHOUSE MANAGER

The Linde Warehouse Manager is a modern and modular warehouse software solution. The compact system provides powerful features to run your warehouse logistics processes from inbound to outbound and is easily customizable to your individual requirements. Additionally, the Linde Warehouse Manager can be integrated smoothly in your current IT-landscape due to its strong interfacing options. As a result, customers admire the simplicity and the short implementation times the system comes with.

FLEXIBLE AUTOMATION FOR EVERY WAREHOUSE

The Linde Warehouse Manager orchestrates all required automation systems, also with the integration of manual processes.

WAREHOUSE MANAGEMENT SYSTEM (WMS)

Manages and optimizes warehouse operations, including inventory management, order fulfillment, shipping, and receiving. It provides real-time visibility into inventory levels, locations, and movements.

WAREHOUSE EXECUTION SYSTEM (WES)

Manages and optimizes the execution of warehouse operations, including order picking, replenishment, and transportation. It steers warehouse operations, automates workflows, and uses data analytics to optimize processes and improve efficiency.

WAREHOUSE CONTROL SYSTEM (WCS)

Orchestrates and optimizes automated material handling equipment. It directs inventory movement in real-time within the automated systems for maximum efficiency. The WCS also integrates with WMS/WES to synchronize inventory operations.

FLEET CONTROLLER

Manages and optimizes vehicle fleets and provides real-time visibility into location, status, and performance. It tracks usage, monitors battery, schedules maintenance, and optimizes routes and dispatching. This improves efficiency, reduces costs, and enhances safety.

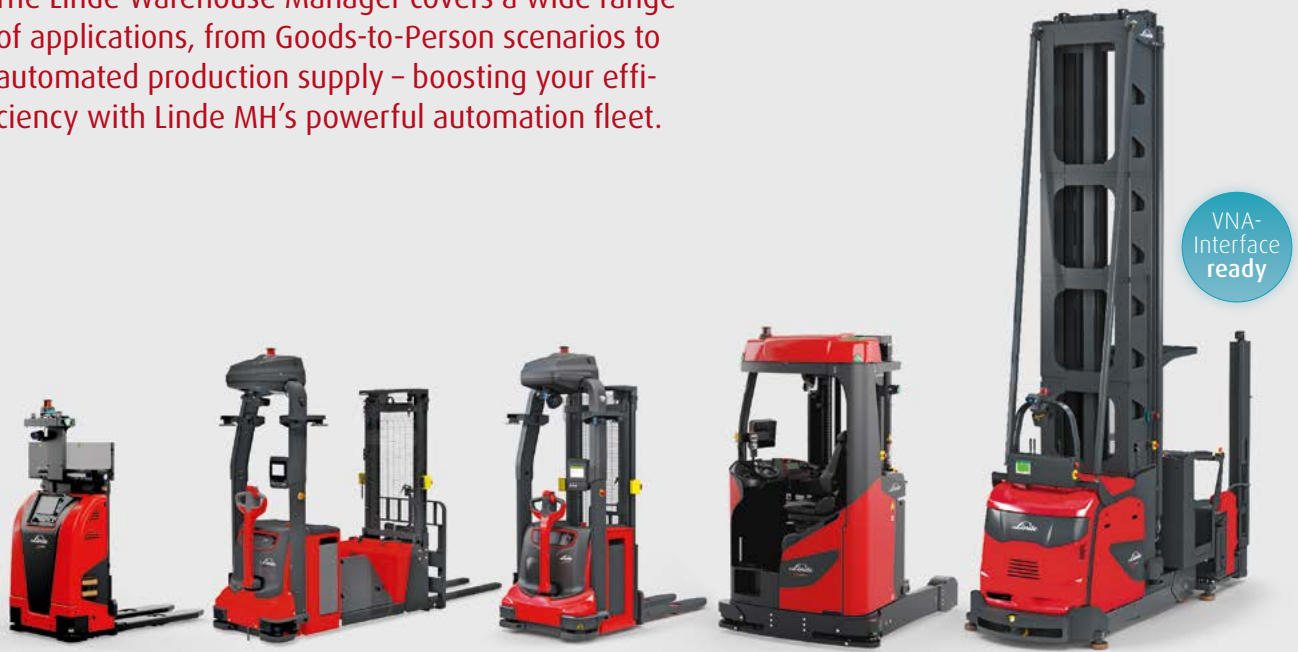

FORKLIFT GUIDANCE SYSTEM (FGS)

Optimizes warehouse tasks by directing drivers with efficient routes and task assignments. It prioritizes tasks, reduces idle time, and streamlines material handling. Using predefined rules and barcode scanning, it minimizes errors and boosts productivity.

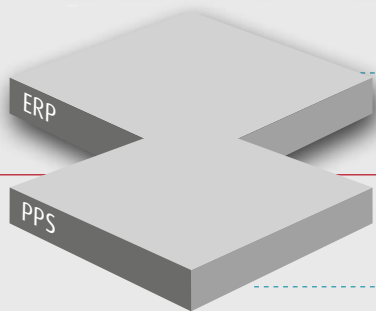

INTERFACES & INTEGRATION

High IT-security standards with safe data encryption are of highest importance for Linde MH, so the LWM can be seamlessly connected within your IT- and automation infrastructure, such as:

The Linde Warehouse Manager covers a wide range of applications, from Goods-to-Person scenarios to automated production supply – boosting your efficiency with Linde MH's powerful automation fleet.
